# IMS Nederland :

## your reliable partner for steel, stainless steel and aluminum since 1954

IMS Nederland was founded in 1954 in Schiedam, as the Dutch branch of the German group SCHMOLZ+BICKENBACH. Initially, the range mainly consisted of (bare) steel. Over the years, quality steel, stainless steel and aluminium have been added to the delivery program and IMS Nederland has developed into an all-round supplier

Since 2015, the company has been part of the France-based IMS group, which was created in 1980 from the merger of various trading companies and has been part of Jacquet Metal Service since 2010.

IMS group offers a wide range of bar, sheet and tube material in many qualities. These products meet specific requirements that ensure excellent machining by our customers (forging, machining, bending, welding, heat treatment) and have certain mechanical properties when processed. They are used in the production of parts that are subject to severe mechanical loads, such as in many types of machines, engines, lifting equipment, heavy transport equipment, shafts, gears, springs, valves, valves, the automotive industry and the energy sector.

IMS group is now represented in 15 European countries and has 60 distribution centres with a total of approx. 1950 employees

**2011**

This alloy performs remarkably well on high speed automatic lathes. It provides the following benefits:  
 » good machinability  
 » smaller chip than most other alloys

- » longer tool life
  - » high mechanical properties
- As the lead content is <0.4%, this alloy complies with the RoHS standard.

**2007 - 2030**

Good mechanical properties of a machinable alloy are achieved in the 2007 - 2030 alloy.

This alloy is selected when a combination of good machinability and high mechanical properties is required. However, 2007 - 2030 has a low corrosion resistance..

This alloy has reasonable mechanical properties, but is more difficult to machine on automatic lathes.

This alloy is also weldable and can be anodised reasonably well.

**6026**

This alloy is chosen when machinability, corrosion resistance and anodisability come together in 1 product. The mechanical properties of this alloy are also in the medium to high range.

This material has the following advantages:

- » good machinability on high speed automatic lathes
- » can be (hard) anodised well
- » high mechanical properties

## Aluminium profiles

---

Wide choice of profiles in the alloy  
6060 – 6063.

From stock we deliver:

- » square, rectangular and round tubes
- » flat and square bars
- » angle-, T- en U-profiles

We work with several leading European extrusion companies, which have a wide delivery program.

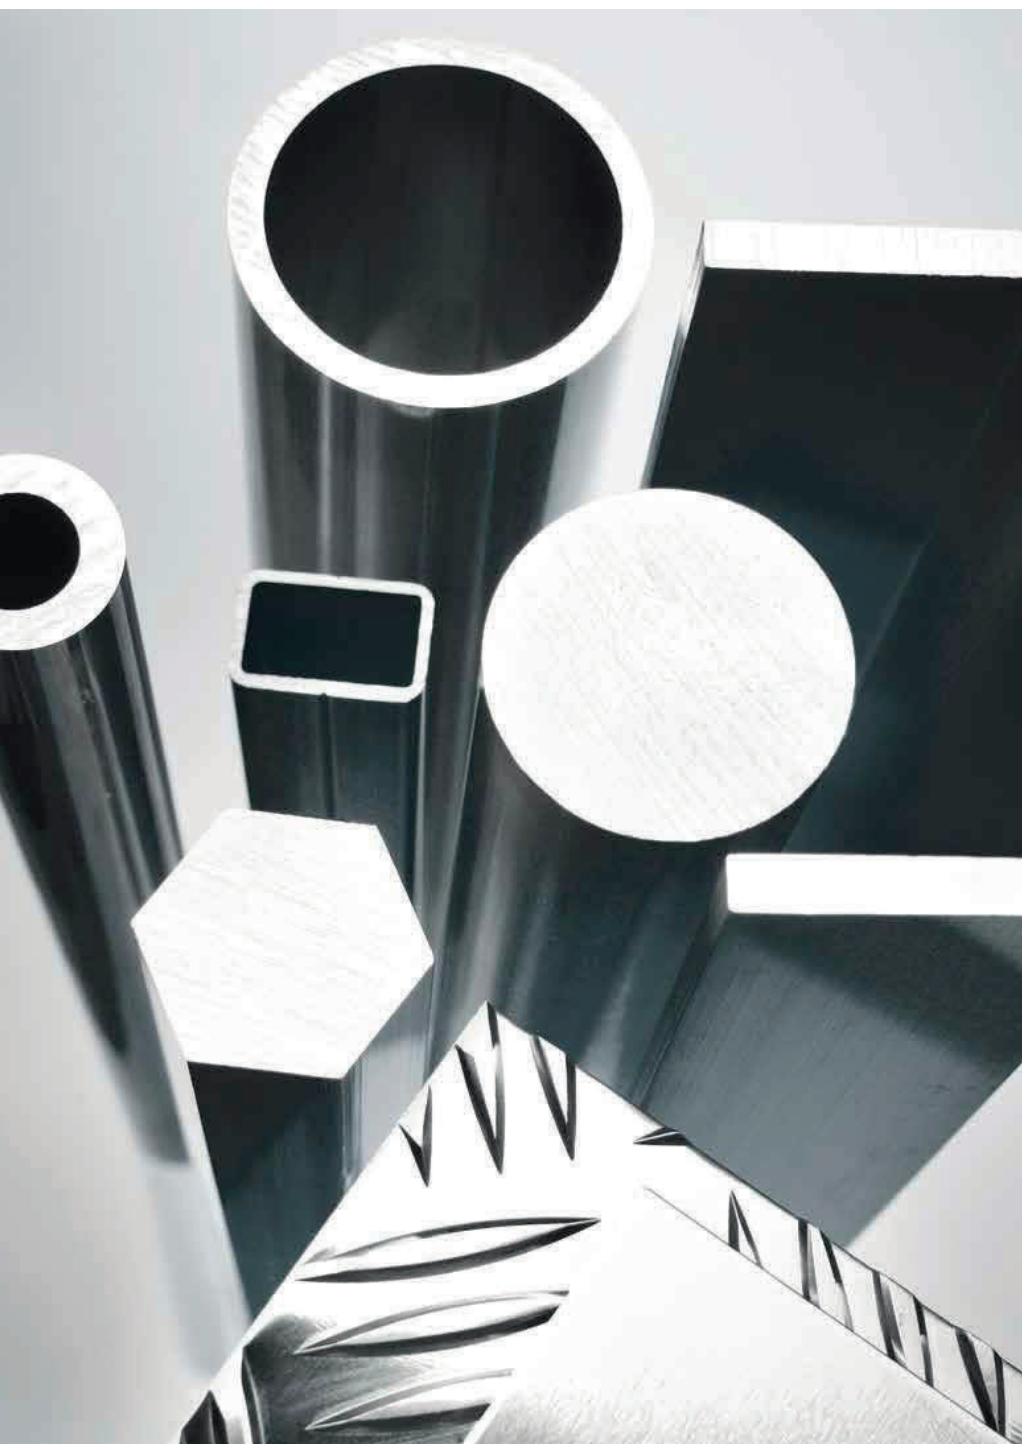

As the alloys in the 6000 series very often require an optimum surface quality,

we also place the highest demands on these products.

These profiles are easy to weld. They are also easy to anodize, paint and powder coat.

We also take care of the production of profiles according to drawings for our customers.
